

Maternal Healthcare Disparities

Thomas, Gedeon, Joann

2025-06-10

Data

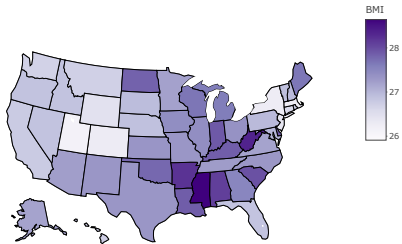

- ▶ Aggregated by State, PriorBirthsNowDeceased, TobaccoUse, PrePregnancyDiabetes, PrePregnancyHypertension
- ▶ AverageMotherAge
- ▶ AverageBirthWeight
- ▶ AveragePrePregnancyBMI
- ▶ AverageNumberPrenatalVisits
- ▶ AverageIntervalSinceLastBirth

Questions

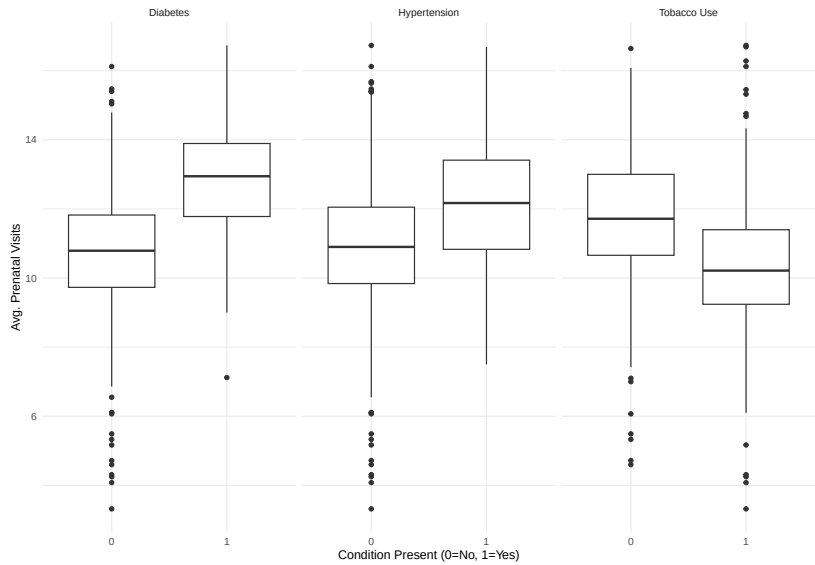

- 1) Do certain states have higher BMI?
- 2) Does the amount of prenatal care visits relate to maternal health risk factors (diabetes, hypertension and tobacco use)

States vs. BMI

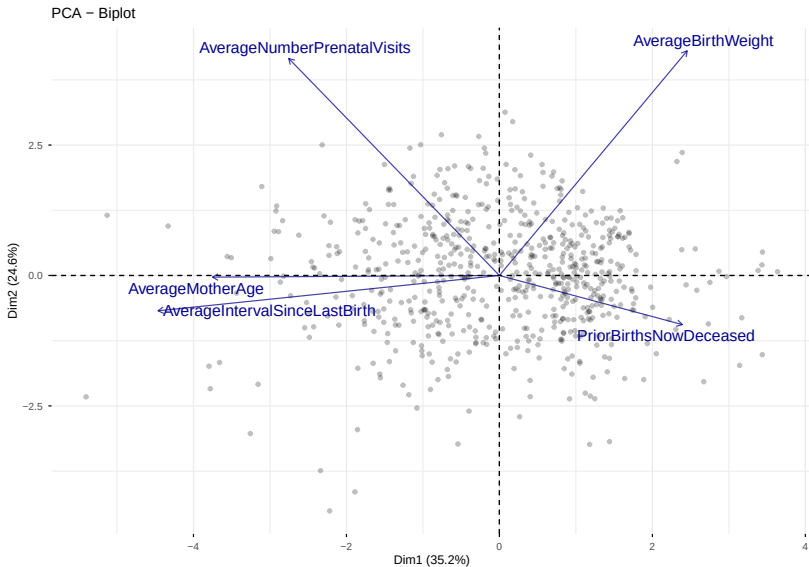

Pre-Pregnancy BMI of the United States of America

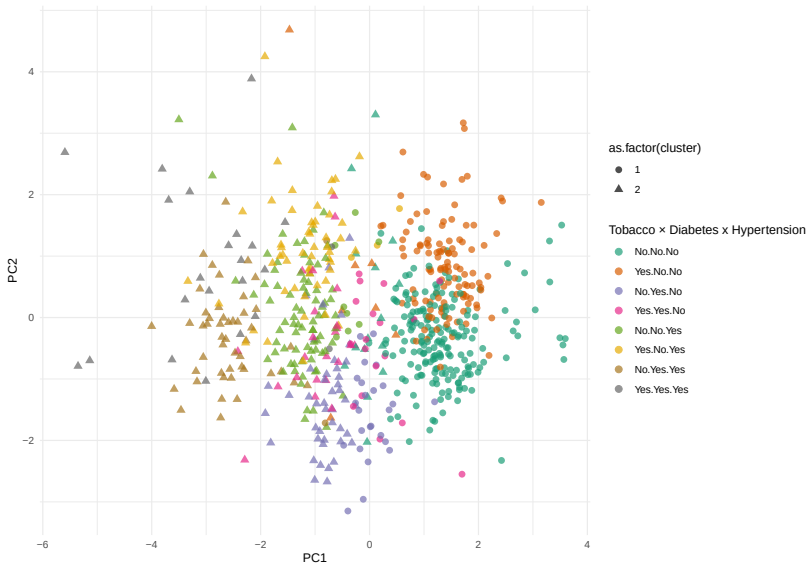

Prenatal Visits Versus Risk Factors

Infant Mortality Versus Prenatal Visits

Tobacco, Diabetes, And Hypertensions Effects on Infants

Conclusion

- ▶ More prenatal visits observed for mothers with diabetes or hypertension.
- ▶ Fewer visits among tobacco users may signal gaps in care outreach.
- ▶ There are regional differences in BMI
- ▶ Mothers who visited the doctor more often seem to have better infant health outcomes despite any risk factors
